The paper concentrates on the theory of domination in graphs. The split domination in graphs was introduced by Kulli and Janakiram.

Title Split Domination Independence and Irredundance
June 18th, 2017 - Abstract In 1978 Kulli and Janakiram defined the split dominating set a dominating set $S$ of vertices in a graph $G$ if the induced subgraph $G[V \setminus S]$ is disconnected. If $G[V \setminus S]$ is connected, then $S$ is called a split dominating set. The split domination number of $G$ is the minimum size of a split dominating set in $G$.
